EDUCATION

- **Bachelor of Technology in Information Technology** *October 2024- April 28*
Indira College of Engineering and Management, Pune CGPA: 8.43
- **H.S.C (Science) Army Public School, Dehu Road, Pune** *August 2022- March 2024*
Percentage: 82.8
- **S.S.C - Army Public School, Dehu Road, Pune** *June 2016- March 2022*
Percentage: 89.33

PROFESSIONAL SUMMARY

An undergraduate studying information technology who is passionate about real-time data and rapidly changing technologies. Intermediate to beginner level skills in HTML, CSS, MySQL, Python, Java and C++, along with outstanding soft skills like leadership, flexibility, and teamwork. Eager to land an internship in order to build industry-level skills, obtain real-world experience, and participate in worthwhile projects.

TECHNICAL SKILLS AND INTERESTS

Programming Languages: Java, C++, HTML, CSS

Core Concepts: Object-Oriented Programming (OOP), Basic Data Structures, Algorithms (Searching and Sorting), Problem Solving

Development Tool Platforms:: Visual Studio Code, Git, GitHub

Database Technologies: MySQL, Relational Database Concepts, SQL Basics

Soft Skills: Analytical Thinking, Self-Learning Ability, Adaptability, Communication, Presentation Skills, Leadership

Relevant Coursework: Data Structures and Algorithms (Arrays, Stacks, Queues, Searching, Sorting), Object-Oriented Programming using Java and C++, Database Management Systems (Relational Model, SQL Basics, Normalization), Fundamentals of Web Technologies

Vocals: English, Hindi, Marathi

PERSONAL PROJECTS

- **MedistatInsights – AI-Driven Medical Image Analysis Platform**
A web-based application that takes Blood Smer report as inputs and returns whether image is of infected or uninfected patient.
 - A full-stack web application with a deep learning model for automated blood smer cell image analysis.
 - Used Flask to build a REST-based backend that handles picture uploads, preprocessing, and real-time inference with a TensorFlow CNN model.
 - Created a pipeline for prepping images that included resizing based on the geometry of the input, normalizing, and converting tensors before making predictions.
 - Integrated the trained CNN model (.h5) for binary classification of malaria-infected vs uninfected cells, and give probability based prediction result.
 - Developed a responsive frontend dashboard using HTML, CSS, and JavaScript to enable image upload, API communication, and result visualization.
 - Enabled cross-origin communication between the frontend and backend using CORS protocol, providing efficient client-server interaction. Followed modular coding practices, error handling, and version control workflows to improve maintainability and reliability.
 - Tech Stack: Python, Flask, TensorFlow, NumPy, PIL, HTML, CSS, JavaScript, REST APIs

ACHIEVEMENTS

- **Internal Hackathon SIH Qualifier:** Shortlisted for Smart India Hackathon (SIH) final submission. *(2025)*
- **School Captain** Managed event planning, team organization and maintaining discipline. *(2024)*
- **Competitive Examination:** Cleared written for Sainik School Examination for Defense forces.

CERTIFICATION

- **DSA in C++** Clarified basics about programming in c++, Data Structures and Algorithms. *(November 2025)*
- **OOPs in C++** Studied and implemented OOPs concepts in C++. *(December 2025)*
- **DSA and Web Development** Started practicing in Java and Web Development in MERN Stack *(Ongoing)*
